RESEARCH INTERESTS

I work on hardware–algorithm co-design for early fault-tolerant quantum computation. Algorithms, architectures, and physical control are usually developed in separate layers joined by worst-case abstractions. I design them together, around the native resources and error mechanisms of a specific device. In practice this means tracing an algorithm’s accuracy requirement down to a phase-angle tolerance, then to a compiled gate requirement, then to a pulse-level control constraint, and optimizing the whole chain at once.

My interests span quantum algorithms and QSP/QSVT, quantum error analysis and fault tolerance, adaptive quantum control, hybrid CV–DV computation, photonic quantum computing, cavity QED, and spin–photon interfaces.

HIGHLIGHTS

- **Record:** 9 peer-reviewed publications, 2 preprints or manuscripts under review, and 4 in preparation; 5 of those 6 in-progress works are first- or co-first-authored. 90 citations, *h*-index 3 (Google Scholar, August 2026). Venues include IEEE QCE, HPCA (under review), an ISCA-located workshop, SPIE Photonics for Quantum, and *APL Computational Physics*.
- **Architecture:** Designed a native trapped-ion qudit–oscillator instruction set and proved three of its primitives generate universal Hamiltonians; compiling dissipative vibronic dynamics onto a single $^{171}\text{Yb}^+$ ququart cut gate count from 96 to 28 per Trotter step against the superconducting realization.
- **Control:** Built HyPulse, a GRAPE-based pulse-synthesis framework for hybrid CV–DV gates, including single-step Toffoli synthesis from native trapped-ion interactions.
- **Algorithms:** Showed QSP block-encoding and phase-angle errors cross-compensate to first order, and built a constrained optimizer suppressing correlated control error by $4\text{--}19\times$; co-led the first experimental realization of QSP on a programmable photonic integrated circuit.
- **Funding:** Co-Entrepreneurial Lead on a \$50K NSF I-Corps Teams (Quantum+X) award; supported as GRA on NSF NQVL QACTI (Duke subcontract).
- **Teaching and mentoring:** Preparing the Professoriate Fellow, co-teaching ECE 211 (Electric Circuits); mentored two undergraduate researchers on machine-learning approaches to quantum control.
- **Service:** Sub-reviewer for 5 manuscripts across *IEEE J-STSP*, IEEE QCE, and the SFWM workshop at SC; K–12 outreach volunteer at Montana State; member, IEEE and IEEE Photonics Society.

EDUCATION

Ph.D. Candidate, Electrical Engineering , North Carolina State University	2024–Present
Advisor: Prof. Yuan Liu · Expected May 2027 · GPA: 4.0/4.0 Dissertation: <i>Co-Design of Quantum Algorithms, Architectures, and Control for Early FT Hardware</i>	
M.S., Electrical Engineering , Montana State University	2022–2024
Advisor: Prof. David L. Dickensheets · GPA: 3.87/4.0 Thesis: <i>MEMS Cantilevers for Dynamic Strain Studies of 2D Materials</i>	
M.S., Electrical Engineering (Electronics) , Qazvin Azad University, Iran	2012–2015
B.S., Electrical Engineering (Electronics) , Karaj Azad University, Iran	2006–2011

Grand Unification of Quantum Algorithms on Photonic Integrated Circuits

- Source of Support: NSF I-Corps Teams (Quantum+X)
- Role: Co-Entrepreneurial Lead
- Project Dates: 2026
- PI: Qing Gu (NC State, ECE/Physics); Technical Co-Lead: Yuan Liu (NC State, ECE/CS); Co-Entrepreneurial Lead: Elaheh Karooby; Industry Mentor: Amirhassan Shams-Ansari (Monarch Quantum)
- Total Project Amount: \$50,000

NQVL:QTSD:Pilot/Design: Quantum Advantage-Class Trapped Ion System (QACTI)

- Source of Support: NSF National Quantum Virtual Laboratory, via subcontract from Duke University
- Role: Supported as Graduate Research Assistant
- Lead PI: Ken Brown (Duke University); NC State: Yuan Liu, Frank Mueller
- Phase 1 (NSF 2410675): \$100,000, 08/2024–07/2025
- Phase 2 (NSF 2531350): \$390,000, 09/2025–08/2027
- Building an advantage-class trapped-ion quantum computer for remote use by the scientific community, with an open-source hardware/software stack.

Prospects in Theoretical Physics (PiTP), Institute for Advanced Study, Princeton 2026

Graduate Merit Award, College of Engineering, NC State University 2024–2025

AIM Photonics Summer Academy, MIT 2023

Summer of Quantum Short Course, LPS Qubit Collaboratory 2023

Excellent Graduate Student in Electronics Engineering, Qazvin Azad University 2015

Top 3 Undergraduate Student in Electronics Engineering, Karaj Azad University 2009

Best Patent, Kharazmi Festival, Tehran, Iran 2004

Graduate Researcher, Quantum Computing and Engineering, NC State University 2024–Present

Advisor: Prof. Yuan Liu

- Designed a native trapped-ion hybrid qudit–oscillator instruction set and proved that three of its primitives generate universal Hamiltonians, with no synthesized mode-coupling operation required.
- Compiled dissipative vibronic dynamics of a three-chromophore complex onto a single $^{171}\text{Yb}^+$ ququart, cutting gate count from 96 to 28 per Trotter step relative to the superconducting realization and reproducing published trajectories to $\sim 1.1\%$ RMSE.
- Built HyPulse, a GRAPE-based pulse-synthesis framework for hybrid CV–DV gates, and extended HybridLane (PennyLane) to native qudit–oscillator circuits.
- Co-led the first experimental realization of QSP on a programmable photonic integrated circuit, synthesizing nonlinear functions on linear-optical hardware.
- Optical characterization and design of nanophotonic structures for light–matter interaction (cavity QED).
- Collaborations across ECE, physics, and computer science, including Duke University’s NQVL for trapped-ion experimental validation.

Graduate Researcher, MonArk NSF Quantum Foundry, Montana State University 2022–2024

Advisors: Prof. David L. Dickensheets, Prof. Nicholas J. Borys

- Designed, fabricated, and characterized MEMS/NEMS devices for optical studies of 2D quantum materials, from EBL and photolithography through SEM/AFM metrology.

Preparing the Professoriate (PTP) Fellow, NC State University 2026–2027

Faculty mentor: Dr. Jennifer Marley (ECE). Year-long teaching apprenticeship: co-teaching **ECE 211, Electric Circuits**, the required sophomore circuits course for EE, CPE, and BME majors, while developing a teaching portfolio and philosophy statement and completing pedagogy coursework.

Teaching Assistant, Circuits and Systems Laboratories 2022–2025

NC State University, Signals, Circuits, and Systems Laboratory (~ 25 students per section). Montana State University, Electrical Circuits Laboratory (~ 20 students per section, 2022–2023).

Instructed students in building and characterizing RLC and power circuits, bench measurement, and data analysis, with an emphasis on clear technical reporting and experimental documentation.

Teaching Assistant, Microfabrication Laboratory, Montana State University 2022–2023

~ 20 students per section. Prepared wafers, tooling, and process recipes ahead of each session, then walked students through a full multi-layer transistor fabrication flow in a cleanroom: oxidation, photolithography, deposition, and both wet and dry etching.

COURSES PREPARED TO TEACH

Core undergraduate: circuits, signals and systems, electronics, semiconductor devices, microfabrication and nanofabrication laboratory.

Graduate and elective: quantum computing architectures, quantum control and pulse-level programming, quantum algorithms and QSP/QSVT, photonic and quantum devices.

Samuel Firmansyah, Undergraduate, Computer Science, NC State University

Spring 2026

Project: AI-based robust quantum signal processing (learned robust angle synthesis).

Nidhi Grover, Undergraduate, Computer Science, NC State University

Spring 2026

Project: AI-based pulse synthesis for hybrid CV-DV gates on trapped-ion hardware.

PEER REVIEW

Sub-reviewer on program-committee and editorial assignments for Prof. Yuan Liu and Prof. Frank Mueller (5 manuscripts, 2025–2026):

- *IEEE Journal of Selected Topics in Signal Processing*, Special Issue on Quantum Technologies, 1 manuscript (2026)
- IEEE International Conference on Quantum Computing and Engineering (QCE, IEEE Quantum Week), 2 manuscripts in the Quantum Applications (QAPP) and Quantum Machine Learning tracks (2026)
- International Workshop on Software Frameworks and Workload Management on Quantum and HPC Ecosystems (SFWM) at SC, 2 manuscripts (2025, 2026)

MEMBERSHIPS

Student Member, IEEE

2026–Present

Member, IEEE Photonics Society

2026–Present

OUTREACH

K–12 Outreach Volunteer, Montana State University

2023–2024

Ran hands-on demonstrations for visiting school groups at MSU's annual campus science outreach day, alongside research groups from across the university: simple photonics experiments, plus a cleanroom station where students tried on fabrication garments and saw how devices are made.

Quantum algorithms & theory: QSP/QSVT, block encodings, Hamiltonian simulation, open quantum systems, hybrid CV-DV computation, quantum error analysis.

Quantum control: GRAPE, pulse synthesis, constrained optimization, differentiable simulation, hardware-aware compilation, Hamiltonian-based control.

Software: Python, JAX, QuTiP, PennyLane, Qiskit, Strawberry Fields, MATLAB, Julia, C/C++.

Machine learning: Neural networks, Fourier neural operators, learned pulse synthesis, physics-informed and differentiable training.

Photonics & hardware: Programmable photonic circuits, Lumerical FDTD/INTERCONNECT/qINTERCONNECT, COMSOL, nanophotonic design and fabrication, optical characterization.

Software and electrical engineering roles, 2011–2021 (FDM4 Canada; power and industrial systems engineering and project management).
